MITEK® QUALITY & SERVICE

MiTek® has manufactured connector plates for more than 50 years. No one does it better! Dependable and consistent, MiTek connector plates offer the highest nail values in the industry – values that remain consistent plate after plate because of stringent quality control and extensive testing.

Quality is evident in everything we do at MiTek.

Tests conducted on the raw steel before and during manufacturing, as well as on the finished connector plates, assure you of reliable truss performance.

We use only the highest quality steel for our connector plates. MiTek 20 gauge connector plates are manufactured from ASTM A-653 Grade 40 structural steel. MiTek high strength plates are made from ASTM A-653 HSLAS Grade 60 steel (G90 for Canada). The steel used in connector plate manufacturing is hot-dipped galvanized resulting in a G60 coating designation. Our plates meet or exceed all required mechanical properties.

Our in-house quality control team monitors every phase of the plate manufacturing process including steel thickness, galvanized coating, yield and tensile strength, hardness, and nail characteristics.

UNIFORM, STANDARDIZED PACKAGING

Flexibility and standardization for your business. Consistency throughout the MiTek network.

We produce and inventory huge numbers of connector plates, in hundreds of sizes every day, in regional facilities throughout the country.

In addition to producing a top-quality product, our specialty is getting it to you. When you need it. Where you need it. Whether it's connector plates, special metal products or builder hardware, we usually ship within 3 days or less of taking your order.

Be assured that MiTek is always looking for ways to improve our service and value to you.

To that end, we offer standardized packaging across our delivery network. So when you order MiTek plates, you'll get uniform packaging in box and pallet quantities no matter which facility ships your order.

Uniform packaging is a win-win for everyone.

For MiTek, standardization simplifies the process of packaging and shipping connector plates from multiple locations.

Our customers benefit by always receiving consistent, predictable packaging from any location in the MiTek network.

20 gauge plates come in easy-to-handle Banded-Pack™, tumble pack boxes, or bulk packaging. 16 gauge and high-strength connector plates (18, 20 gauge) ship in tumble pack boxes. It's that simple!

Other benefits include smaller box sizes for our larger plates, less cardboard pallet wrapping, and standard pallet weights (2,800-3,000 lbs) for banded plates.

▼ Allowable Lateral Resistance Design Values

AA Orientation

V LRAA = Allowable value for metal connector plates loaded parallel to the grain with the plate axis (tooth slots) **parallel** to the load.

LRAA	LRAE
LREA	LREE

V LRAE = Allowable value for metal connector plates loaded **perpendicular** to the grain with the plate axis (tooth slots) **parallel** to the load.

AE Orientation

EA Orientation

V LREA = Allowable value for metal connector plates loaded parallel to the grain with the plate axis (tooth slots) **perpendicular** to the load.

V LREE = Allowable value for metal connector plates loaded **perpendicular** to the grain with the plate axis (tooth slots) **perpendicular** to the load.

PACKAGING

BANDED PACK®, EASY-PACK®, BULK & TUMBLE PACKS

MORE OPTIONS THAN ANYONE!

When it comes to packaging connector plates, MiTek offers more options than any other supplier –options that can save you time and money, and reduce waste around your plant.

▼ Banded Pack®

Banded Pack® and Easy-Pack® plates come in easy-to-handle banded stacks of 20 plates each. Banded packaging eliminates counting, reduces pick time, increases set up speed, and reduces clean-up time.

Banded packaging is available throughout our entire delivery network for plates with the MT designation.

▲ Tumble Packs

are loose plates packed in manageable cartons weighing about 60 lbs. They fit near your tables for instant accessibility, efficiency and added convenience.

▼ Bulk Packaging

Our bulk packaging is the way to go for large-quantity packaging of the plates you use the most.

Combined with our unique storage bin, you are assured of having the plates you use most, on hand and in stock.

CONNECTORS

FOR SPECIAL APPLICATIONS

ANOTHER
PRODUCT
INNOVATION
FROM MITEK®

*MiTek Manufactures a Variety of Connectors
for Specialized Applications and Uses...*

Stainless Steel Plates

MiTek's solution to jobs requiring resistance to salt, corrosion and chemicals.

PowRR Band™ Anti-Split Plates for the Railroad Industry

With more angled teeth per square inch, this anti-split plate is a winner in the crosstie producing industry. It reduces splitting and checking in the tie end grain of railroad ties and bridge timbers, extending the life of those components.

ing industry. It reduces splitting and checking in the tie end grain of railroad ties and bridge timbers, extending the life of those components.

Coil-Fed Plates

These patented continuous coil-fed plates are designed for use with MiTek's JackRabbit® Coil-Fed Joint Assembly Machine, which produces jack trusses the fastest way possible. The plates are applied to both sides of the member and cut simultaneously.

X-Cellent™ Pallet Plates

Extend the life of wood pallets by reinforcing or repairing weight-bearing members.

MULTI-BRACE™

All-purpose permanent brace

The MiTek® Multi-Brace™ is the all-purpose brace that satisfies virtually all of your permanent truss bracing requirements, yet installs more quickly without adding costs. The ultra-light Multi-Brace delivers simple shipping, handling on the ground and in the roof system – assuring you of a safe and accurately braced roof system.

*Multi-Brace,
the all-purpose
brace from
MiTek*

Its unique nesting feature allows for substantial material savings since it does not require the customary one truss or 24" overlap of conventional lumber bracing.

MiTek Multi-Brace, the all-purpose brace.

STABILIZER®

TEMPORARY & PERMANENT BRACING

THE NO-NAIL SOLUTION!

For Accurate Spacing & Reliable Bracing

The MiTek STABILIZER® truss brace and spacer is all a framer needs for fast and accurate truss installation!

Made of **20 gauge steel**, it's the first truss spacer to provide precise 16" and 24" o.c. spacing, as well as temporary construction bracing and permanent lateral bracing.

Easy to use and handle, the STABILIZER fits over the 2x side of a chord, and rides to the roof on the truss. There's nothing extra to carry.

It sets with a hammer - No nails!

And the installation location is determined by MiTek® 20/20® Engineering.

Don't just brace it, **Stabilize It**, with the all-in-one solution for fast and accurate truss bracing installation... the STABILIZER!

MiTek®
MiTek®

ELIMINATOR™

FACTORY-INSTALLED REPLACEMENT FOR T-BRACING

Speed up roof framing and eliminate field-applied compression web bracing with the MiTek **ELIMINATOR™**.

Engineered by **MiTek® 20/20®** software, ELIMINATOR is the factory-installed alternative to field-applied T-bracing.

You'll deliver peace of mind along with engineered components when the bracing's installed in your plant, in the *right places* – reducing web bracing problems *before* they occur.

The ELIMINATOR engineered solution to T-bracing installation...

- ◆ Reduces labor costs and call backs
- ◆ Improves job safety
- ◆ Facilitates building inspections
- ◆ Cost-effective
- ◆ Builds a better roof system

HINGE PLATE

THE PIGGYBACK ALTERNATIVE

ELIMINATE PIGGYBACKS

MiTek's Hinge Plates save the hassle of building and setting cap trusses, so why mess around with piggybacks?

Trusses built with MiTek hinge plates are the simple, engineered alternative to piggyback trusses.

The MiTek Hinge Plate allows truss sections to fold flat for shipping and handling – while staying aligned and in plane.

Peak Performer Installation

Attach the hinge plate to both faces of the peak using #10 hanger nails. Hammer through the pre-punched holes in the plate.

Our Peak Performer™ hinge plate delivers even greater jobsite flexibility. It folds flat to match the truss pitch, until the truss is raised into position and installers attach it to both faces of the peak. The nail pattern is offset for a strong, secure connection. There are no loose parts, no extra trusses to build, and no worries about overheight loads on high-pitched trusses.

There's only one truss to build, and one to set. It's that simple.

METAL WEB

TRUSS SYSTEMS

POSI-STRUT® Metal Web Truss System

The perfect complement to any truss manufacturing operation, MiTek's **POSI-STRUT® Metal Web Truss System** is ideal for making floor joists and roof rafters.

You can build them in five depths to match I-joists and conventional framing.

Along with strength and maximum performance, the POSI-STRUT system offers...

- ◆ Lightweight installation
- ◆ Open web truss design
- ◆ Longer clear spans
- ◆ 3.5" nailing flange
- ◆ Trimmability on site

TRIM-IT™ Trimmable-End Metal Web Truss System

Trim-It™, MiTek's patented trimmable-end Metal Web Floor Truss System gives your customers the ultimate in design and installation flexibility.

It's light weight, and its alternating web design allows for easy pass-through of mechanical/electrical. Add longer clear spans, wide on-center spacing, and on-site trimmability, and it just doesn't get more efficient than this.

- ◆ Trimmable on site
- ◆ 11.25" • 11.875" • 14" • 16" depths
- ◆ Design them with MiTek® **20/20®** software...build them with manual or automatic MiTek equipment
- ◆ Easy to install
- ◆ Fully tested to deliver reliable field performance

INDUSTRY PARTNERS

BUILDER HARDWARE • HANGERS

MiTek forms alliances with leading producers of quality construction products to bring you the best the industry has to offer.

Builder hardware is an example of one of those products. We offer a complete line of code-approved hardware and hangers manufactured by USP Structural Connectors and Simpson.

- ◆ Joist hangers
- ◆ Strap hangers
- ◆ Truss hangers
- ◆ Hurricane & framing anchors
- ◆ Post/column products
- ◆ Brackets
- ◆ Ties, nails & bolts

...to name a few!

And you can get them right along with your connector plate order.

We offer full customer service and technical support.

For added convenience, our MiTek® 20/20 Engineering software specifies USP or Simpson products on your engineering drawings.

STEEL SYSTEMS

Light GAUGE STEEL systems

The goal of Aegis Metal Framing, LLC is to dramatically increase the use of software-enabled, prefabricated light gauge steel building components in the commercial/institutional construction market.

Aegis is the only light gauge steel producer that offers fabricators a full line of products including connections, software, and engineering services for:

- ◆ Trusses, the **ULTRA-SPAN®** System
- ◆ Floors, the **TradeReady®** Floor System, and
- ◆ Walls, the **WallSolutions™** System.

Aegis' in-house software developers use the industry-leading MiTek® 20/20 software suite as the foundation for Aegis' complete line of layout, engineering, estimating, and management programs.

And of course, we supply a full line of light gauge steel wall, floor and truss materials and accessories to component manufacturers.

STEEL SHEAR WALL SYSTEM

The Hardy Frame® shear wall system is a fully engineered and tested light gauge steel frame designed to resist earthquake and wind loads.

It's the simple, effective replacement for plywood shear walls in either wood or steel frame construction.
